

Academy of 3D Connection in Osseointegration

Sponsored by Wayland Oral Surgery

Presents:

3D Guided Implantology: Total Integration from Start to Finish

The Value of Precision

16 CE Credits

Seating is limited. Register today!

Call 508-276-1222 or visit www.waylandoralsurgery.com

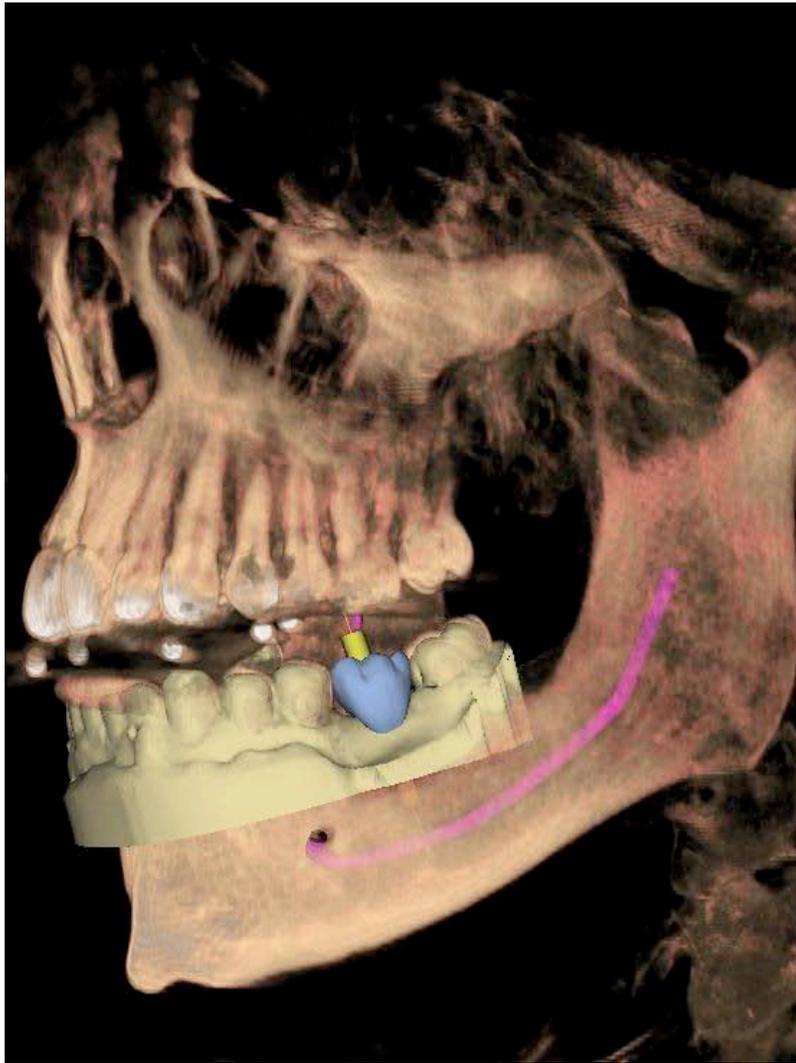

date

MAY 23-24TH, 2013

location

**RITZ-CARLTON
BOSTON, MA**

3D Guided Implantology is a unique educational event covering 3D CBCT imaging, implant planning, CEREC-GALILEOS integration, live guided implant surgery, interactive discussions and dinner with renowned faculty. Join us for a hands-on experience in 3D guided implants!

TOTAL INTEGRATION

This program is specifically designed to provide a unique experience in 3D implantology from start to finish. With lectures from leaders in various disciplines of dentistry combined with live surgery and hands-on experience in placing CBCT guided implants (model based surgery), you will truly appreciate the value of precision in implant dentistry.

This course will demonstrate how to plan implants from a Perio-Prosthetic perspective, present the case in the most comprehensive and clear format, and get precise surgical guides that match your plan. You will be able to execute the surgery with the highest predictability in a least invasive fashion.

Surgical guide options will also be discussed, including direct GCI surgical guides, the new OPTIGUIDE and CEREC milled guides.

Call 508-276-1222 or visit

(under "Continuing Education") for more information!

IMPLANT TREATMENT PLANNING

Treatment planning from a Perio-Prosthetic perspective utilizing 3D CBCT provides an ideal functional and esthetic result.

Learn more about stage I, II and III surgical and prosthodontic protocols and how to provide the best options for your patients.

GUIDED IMPLANT PLANNING

Learn about efficient chairside implant planning with the patient and fully guided implant placement using 3D CBCT surgical guides.

For experienced surgeons, we will demonstrate a path to more accurate placement and prosthodontically driven planning that results in better, more predictable outcomes.

PRECISION - 3D SURGICAL GUIDES

Perio-Prosthetic planning is imperative in implant dentistry. However, oftentimes the plan is not executed clinically. The missing ingredient in guaranteeing a long-term success is precise execution.

The true value of 3D implantology is:

- Precision
- Proficiency
- Predictability
- Profitability
